\$2.4 mil

Location
RMIT University
City Campus

Year
2015

Project:

SoET (School of Engineering TAFE) Relocation & SEH (College of Science, Engineering & Health) Relocation involves relocating workshops, offices, teaching space, computer room from various locations at the RMIT University city campus to Building 70. This project involved work in a number of buildings, engaged 1:1 Architects as lead consultant, and two separate builders. The project took more than a year to complete and has achieved all key objectives for an improved working environment.

BE Contribution:

BE was engaged to provide a full range of building services design and specialised services design for relocating workshops with machines. BE's responsibility was to enable a variety of machines to operate safely and smoothly after relocation; and to implement the latest Australian Standards, RMIT standards and OH&S requirements.

The biggest challenge was the collaboration with various members of the project team, such as SoET and SEH representatives, workshop managers, project managers, machine auditors and other consultants.
